

Stream to KLIC

Two short guides. The organizer sets up the broadcast and brings people in. Each player sets up OBS and goes live.

GUIDE 1

For the organizer

You create the broadcast and decide who's in it.

1 Turn on monetization (once)

To create a broadcast that streams on KLIC, your account needs monetization on. Click **Start Earning** (top of the site) or go to **Dashboard → Earnings** and finish setup. You only do this once. Broadcasts that only embed Twitch, Kick or YouTube don't need it.

2 Create the broadcast

Click **Create Broadcast** (top right). Fill in **Broadcast Name**, **Description**, **Broadcast Date**, **Start Time** and **End Time**, **Category**, and a thumbnail.

3 Pick KLIC as the source type

Under **Sources**, choose the KLIC logo (not the Twitch/Kick/YouTube embed). Turn on **Add my channel** if you're streaming too.

4 Bring in your players, one of three ways

Invite

In the **Invite** tab, search each player's KLIC username and add them. They get an invitation to accept.

Join link

Turn on **Create join link**. After scheduling, send the link to your players. Each one requests to join and you approve them.

Stream keys

In the **Stream Keys** tab, add device keys for extra PCs, consoles or cameras you run yourself.

5 Schedule it

Press **Schedule Broadcast** and confirm. If something's wrong, the page tells you exactly what, like a player who's already booked at that time.

6 Share the two links

In **Broadcast Manager**: send the **broadcast link** to viewers and the **join link** to players. Then approve join requests as they come in. You get a notification for each one.

Send your players Guide 2

Before the broadcast, make sure every player has done a test stream (Guide 2, step 4).

For players

You were invited to a broadcast, or got a join link. About 10 minutes, once.

Players don't need monetization. If you're invited to stream in someone else's broadcast, you don't turn on Start Earning. Only the person creating the broadcast does.

1 Get in the broadcast

Invited: accept the invitation from your notifications (or email). **Join link:** open it while signed in and request to join. You're in once the organizer approves.

2 Copy your server and key

Go to **Dashboard → Stream Keys** (`klic.gg/<your-username>/dashboard/stream-keys`).

Server (for OBS): `rtmps://global-live.mux.com:443/app` . Only use `rtmp://global-live.mux.com:5222/app` for devices that can't do RTMPS, like DJI drones.

Key: your **channel default** key under **Your stream keys**. Reveal it with the eye and copy it. Never show it on stream. If it leaks, press rotate.

3 Set up OBS

Settings → Stream: Service **Custom...**, paste the server into Server and **only the key** into Stream Key. Then **Settings → Output (Advanced):**

SETTING	VALUE
Encoder	NVENC H.264, Apple VT H.264, or x264. H.264 only.
Rate control	CBR
Bitrate	6000 Kbps for 1080p60 · 4500 Kbps for 1080p30 or 720p60
Keyframe interval	2 s
Resolution	Up to 1920×1080
Audio	AAC, 160 Kbps, 48 kHz

4

Do a test stream

Press **Start Streaming** in OBS. On Stream Keys, **click the key you're streaming to**. The preview on the right shows your feed in about 10 seconds. The preview only shows the selected key, so if it says OFFLINE, check which key is selected first.

5

Go live at broadcast time

Start streaming a few minutes before the start time. Your feed shows up in the broadcast automatically.

Already streaming to Twitch or YouTube? Add KLiC as a second output with the **Multiple RTMP outputs** plugin (or Restream / Aitum Multistream), using the server and key above. Make sure your upload speed covers both bitrates combined.

Preview says OFFLINE?

- **Wrong key selected.** The preview follows the key you clicked. Click the key you're actually streaming to.
- **Whole URL in the key box.** The server goes in Server and the key goes in Stream Key.
- **Old key.** If the key was rotated, copy the new one into OBS.
- **RTMPS blocked.** Try the RTMP server URL instead.
- **Dropped for over a minute.** KLiC waits 60 seconds for a reconnect. After that, starting again begins a new stream.
- **OBS stuck on "Connecting..."**. Remove any spaces around the key, and check a firewall isn't blocking port 443 (RTMPS) or 5222 (RTMP).

Still stuck? Email support@klic.gg with your KLiC username, which key you used, and a screenshot of OBS → Settings → Stream.
